STANISLAV UTKIN

Python Backend Developer | MLOps Engineer | Krakow, Poland
|[+48726384286] | thatwhocode@gmail.com| [LinkedIn]| **[GitHub]**

SUMMARY:

Proactive Python Backend Engineer focused on building scalable asynchronous systems and microservices architectures. Strong problem-solving skills with a proven track record of taking complex concepts from zero to production, including integrating ML cores with robust backend infrastructure. Adept at decomposing high-level requirements into reliable, containerized, and optimized technical solutions.

TECHNICAL SKILLS

- **Languages:** Python, C++, SQL.
- **Architecture:** Microservices, Asynchronous Programming, ETL Pipelines
- **Backend & Web:** FastAPI, SQLAlchemy, Pydantic, Nginx, REST API, Celery
- **ML & Data:** PyTorch, Hugging Face Transformers, spaCy, XLM-ROBERTa, NER pipelines
- **DevOps & Tools:** Docker, Docker Compose, Git, Linux (Ubuntu), Azure AI.
- **Databases:** PostgreSQL, Redis, Alembic

WORK EXPERIENCE:

Freelance Backend Engineer / Independent Contractor:

Remote | Sep 2025 – Present:

- **Architected MVP Backend Infrastructure:** Designed and currently developing a distributed microservices architecture for an AI-integrated platform (under NDA). Structured the system into 5 distinct services: Authentication, API/Chat Gateway, ML Core, Data History, and Analytics.
- **Asynchronous Processing:** Built robust backend services using **FastAPI**, decoupling the ML Core from the Chat Gateway by integrating message brokers (**Redis, Celery**) to prevent blocking during heavy model inference
- **Database Design & Management:** Engineered relational schemas using **PostgreSQL** and managed continuous schema migrations with **Alembic** to ensure reliable storage for user history.
- **Microservices Orchestration:** Containerized all backend components and set up a multi-container deployment environment using **Docker Compose**, ensuring service isolation and scalable communication

Machine Learning Engineer / Backend Developer *National Police IT Department (Contract)* | *Nov 2024 – Sep 2025*

- **Architected & Deployed NLP Pipeline:** Developed a two-stage cascade system for extracting Named Entities (NER) from unstructured law enforcement data, achieving **97% accuracy** in weapon classification
- **Model Optimization:** Fine-tuned a custom **XLM-ROBERTa model** on a domain-specific dataset (1500+ texts), reaching an **88% F1-score**
- **Infrastructure & Security:** Designed a fully on-premise solution running on **RTX 3060 Ti** to ensure **100% data confidentiality**. Secured API access using Nginx and SSL
- **Microservices Implementation:** Containerized the solution into separate microservices using **FastAPI** and **Docker Compose** for scalable deployment.

LANGUAGES:

- **English:** B2 (Upper-Intermediate) – Professional working proficiency
- **Polish:** A2 (Elementary) – Basic communication skills
- **Ukrainian:** Native

TECHNICAL PROJECTS:

High-Performance HTTP Server[GitHub] *Stack: C++, Linux API, Sockets.*

- Built a custom HTTP server from scratch to understand low-level networking and memory management
- Implemented request parsing and concurrent connection handling using native Linux sockets

EDUCATION & CERTIFICATIONS:

- **Bachelor's in Computer Science** – V. N. Karazin Kharkiv National University *(Current)*.
- **Associate's in Software Engineering** – KhPI (2022)
- **Certifications:** Microsoft Certified: Azure AI Fundamentals, Docker Foundations
